

Electrical power quality and safety for mining is our game

We have the expertise, field experience and instrumentation for testing electrical equipment for the extractive and beneficiation industries

- Underground MV & HV cable fault location for longwall and open cut operations
- Protective relay testing
- Pilot wire/insulation testing
- Transformer partial discharge testing for draglines and kiosks
- Transformer oil testing
- Ward-Leonard and inverter drive testing for mine winders and draglines
- Flotation tank impeller motor testing
- Synchronous/induction generator and electrical reticulation testing
- Slurry pump motor testing
- 24/7 monitoring, system alarms and notifications
- Battery condition testing and monitoring
